

ANJALI PATWA

Kharghar, Navi Mumbai | anjalipatwa113@gmail.com | [LinkedIn](#)

M.Sc. Data Science Candidate | MySQL • Python • Power BI | Transforming raw data into strategic business insights

EDUCATION

M.Sc. in Data Science

July 2024 – June 2026

SVKM's NMIMS, Nilkamal School of Mathematics, Applied Statistics & Analytics, Mumbai

Bachelor's in Computer Applications

July 2021 – May 2024

Bharati Vidyapeeth, Navi Mumbai

TECHNICAL SKILLS

Data Analysis: EDA, Trend & Pattern Analysis, RFM Analysis, Market Basket Analysis

Programming & Databases: Python (Pandas, NumPy), MySQL (CTEs, Window Functions), PostgreSQL

Business Intelligence: Power BI (DAX, Power Query), Interactive Dashboards, KPI Tracking

Machine Learning: Predictive Modeling (Regression, Clustering, LightGBM)

PROJECTS

Urban Mobility Intelligence System

Feb 2026 – May 2026

- Processed 34.5M NYC taxi records using a memory-efficient PyArrow streaming pipeline (1.1 GB+ parquet data).
- Built a LightGBM ETA model with 28 custom features — MAE of 2.3 min and R^2 of 0.86.
- Developed a hybrid PySpark spatial demand forecast across 2,847 NYC zones achieving R^2 of 0.97.
- Applied Dijkstra's Algorithm via OSMnx on Manhattan's road network, revealing 30.8% route divergence from GPS-tracked paths.
- Deployed all modules in a Streamlit dashboard with a What-If simulator and live Folium map rendering.

E-commerce RTO & Logistics Dashboard | Power BI

Dec 2025 – Jan 2026

- Designed an end-to-end pipeline for influencer profitability, channel attribution, and CAC analysis across campaigns.
- Authored complex MySQL queries (CTEs, Window Functions) joining marketing data with 100k+ transaction records.
- Automated promo code data cleaning via Python, saving 10 hours/week of manual reporting effort.
- Built a Power BI dashboard with Star Schema (Sales, Logistics, Support), RLS for regional managers, and drill-through reporting.
- Identified high-risk delivery pin codes and carrier failures, directly contributing to an 8% reduction in RTO rates.

Customer Retention & Market Basket Analysis

Oct 2025 – Nov 2025

- Executed Market Basket Analysis using Apriori Algorithm in Python to surface cross-sell opportunities in retail transaction data.
- Applied RFM Analysis for customer segmentation with targeted retention strategies for high-value At-Risk cohorts.
- Designed routine-based product bundles from association rules, yielding a 12% increase in Average Order Value (AOV).
